

ABUS Club Newsletter September 2020

Breast Cancer Awareness Month is upon us again and we have much to share!

PROMOTIONAL TOOLS

Encourage women to get their mammograms

Most breast centers have re opened their doors to screening with new disinfection and distancing protocols in place, so it is a great time to remind women not to skip their mammograms this year. Download this <u>free</u> <u>toolkit</u> to access handouts, postcards, social media graphics and a short video to promote "don't skip" breast care during October.

ADVOCACY FOR WOMEN WITH DENSE BREASTS

Read an Opinion Article in Aunt Minnie by Advocate Andrea Wolf

The language we use to talk about supplemental screening matters. See how you can make an impact by changing the way you talk about it. <u>Read now</u>

Get Involved

If you are passionate about better care for women with dense breasts, please visit <u>densebreasttests.com</u> to learn how you can make a difference for women in your state. Health insurance co-pay and deductible fees for supplemental exams for dense breasts are often too costly for some women and prevents them from getting the essential screening they need.

We invite you to join us in a new campaign to advocate for full coverage for essential screening for women with dense breasts.

Join Us for an Empowering Webinar

Learn how to advocate for your patients. Attend – Take Action! Improving Access to Essential Breast Screening for Women with Dense Breasts" webinar Tuesday, October 6, 2020, 7pm ET <u>Register</u>

Use your Social Skills

Take a moment to share these links on your social channels to help raise awareness to fully cover

PATIENT CARE WEBINAR

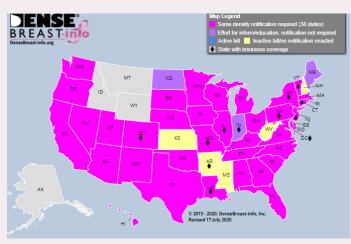

"Don't Skip" Digital Meet Up – October 27, (time) A panel of healthcare providers discuss techniques they've used to engage patients and promote that women return to regular breast screening.

LESS SKIPS CAN HELP SAVE LIVES.

BREAST CARE ADVOCACY IN THE NEWS

This summer, both Pennsylvania and Missouri passed legislation improving insurance coverage for women at high-risk (including dense tissue). Visit <u>densebreastinfo.org</u> to learn more details about these and other states that mandate insurance coverage for women at higher risk for breast cancer. In both instances, the patient may still be responsible for outof-pocket expenses (copay/deductible/coinsurance). Visit <u>densebreasttests.com</u> to learn how to advocate in your state for full coverage for essential screening.

NEW ABUS PROGRAM AUDIT TOOL

A new tool to help audit your ABUS program progress is now available. The tool allows you to input your program data to track volume, recall rates and cancer detection rates. You will be able to view and print the resulting metrics and graphs into a consolidated report that will help you develop growth strategies for your ABUS program.

Objective: Track and audit your ABUS program to ensure you are capturing all dense breasted patients and are receiving proper reimbursement.

Time investment: 1-2 hours per month to input the data and run reports

Goal: Use results to show patient outcomes and financial impact.

Bonus: Set up a formal audit with our implementation manager where she will walk you through the tool, input the data, and use the results to provide growth strategies or create a business review for you to share internally.

<u>Start here</u>

If you have any questions, contact <u>Lindsey Solovey</u>, ABUS Implementation Manager.

NEW RESEARCH

New research studies investigate the use of ABUS beyond screening:

- <u>Automated breast ultrasound compared to hand-held</u> <u>ultrasound in surveillance after breast-conserving surgery</u>
- <u>ABUS as an alternative to hand held ultrasound for</u> response control in neoadjuvant breast cancer treatment
- Another study found diagnostic performance of ABUS was comparable with that of conventional HHUS in evaluating NME (non mass-like enhancement) lesions ABUS evaluation of pure NME lesions was shown as a useful technique with high visibility, especially in malignant lesions. <u>Read more</u>

DENSEBREAST-INFO.ORG RESEARCH

The results of the first of two recently conducted **DB-I** research studies have been published in the *Journal* of Breast Imaging. The study, <u>Radiologic Technologist</u> and Radiologist Knowledge Gaps about Breast <u>Density Revealed by an Online Continuing Education</u> <u>Course</u>, identified provider knowledge gaps and their

predictors based on an analysis of posttest responses to their CME/CE course, <u>Breast Density:</u> <u>Why it Matters</u>. The paper concluded that Important knowledge gaps regarding breast density implications for breast cancer screening, breast cancer risk assessment, high risk screening recommendations, and screening technologies exist among radiologists and radiologic technologists.

Join a webinar where they will discuss the results of their research: **Dense Breasts: What Don't You Know? Knowledge Gaps and Educational Tools** November 12, 7:30 ET | 6:30 CT | 4:30 PT
